DETAILED ACTION

Drawings

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 102

Allowance of claims 6-8 are withdrawn and new rejection applied due to new found art as described below.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 6-8 rejected under 35 U.S.C. 102(b) as being anticipated by US Patent no.4607596 to Whittlestone et al or US Patent No.6257847 to Silver et al.

Application/Control Number: 09/591,981

Art Unit: 3763

Whittlestone teaches an air pump with a movable diaphragm in a chamber with one out port, a shaft operatively connected to the diaphragm and a motor or a driving means which oscillates the diaphragm axially by means of the shaft, the motor being coupled to the diaphragm though threaded engagement the translates motor rotation into diaphragm oscillation.

3. Claims 6-8 rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No.6257847 to Silver et al.

Silver teaches an air pump with a movable diaphragm in a chamber with one out port, a shaft operatively connected to the diaphragm and a motor or a driving means which oscillates the diaphragm axially by means of the shaft, the motor being coupled to the diaphragm though threaded engagement the translates motor rotation into diaphragm oscillation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 4607596 to Whittlestone et al, and further in view of US Paten No. 5749850 to Williams et al.

Application/Control Number: 09/591,981

Art Unit: 3763

Whittlestone teaches a milk collector unit having manifold assembly with a vacuum path 6 and a pulsating pressure path 9, a collection vessel 19 operatively connected to the vacuum path 21 a cup assembly 8 with a housing having an inlet and outlet a liner 7 extending form the housing inlet to the housing outlet, the liner being secured to the housing to form a space between the housing and the liner which is in communication with the pulsating pressure path, pressure in the pulsating path moving the liner within the housing, the manifold further having a hollow boss 10 which extends into the outlet within the liner.

Whittlestone however does not teach a pad or cushion in the cup assembly. Williams teaches a cushion in the cup assembly. (col.7, lines 15-20)

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to have added the cushion in the cup assembly of Whittlestone because according to Williams the cushion will provide comfort for the patient. (col.7 lines 15-20)

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roz Ghafoorian whose telephone number is 703-305-2336. The examiner can normally be reached on 8:30am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 703-308-3552. Any inquiry of a general
